Recent Advances in Computational Mechanics of the Human Knee Joint

M. Kazemi, Y. Dabiri, and L.P. Li

Department of Mechanical and Manufacturing Engineering, University of Calgary

Contents

Abstract

1. Introduction 1
2. Constitutive Modeling of the Tissues 2
3. Computational Models of the Knee joint 5
   3.1 Geometry and Mesh Generation of the Knee
   3.2 Implementation of Tissue Models
   3.3 Finite Element Model Developments
   3.4 Poromechanical Models
4. Verification of the Numerical Modeling 9
5. Validation of the Numerical Modeling 10
6. Pathomechanical Modeling and Clinical Applications 12
   6.1 Ligament Injury and Reconstruction
   6.2 Total and Partial Meniscectomy
   6.3 Cartilage Injury and Degeneration, Osteoarthritis Models
   6.4 Knee Replacement
   6.5 Sports and Gait Modeling
7. Miscellaneous Joint Models 15
8. Discussion: Advances, Challenges and Future Directions 16
   8.1 Anatomically Accurate Geometry
   8.2 Use of Constitutive Models
   8.3 Physiological Loadings and Contact Conditions
   8.4 Future Directions
   8.5 Concluding Remarks
